

# Plant Facts

## Daylily 'Stella d'Oro' *Hemerocallis*

Other Common Names: Stella de Oro, Stella Doro daylily

Photo: BeckyCortines/CC BY-NC-SA/DentonCountyMGA

### General Information

Daylilies are herbaceous, clump forming, perennials. Most flowers bloom for a day, but there are several buds on each scape (leafless stalk). Dormant daylilies die back completely in winter.

### Characteristics

**Hardiness Zones:** 4-9

**Heat Tolerance:** Very High

**Size:** 1 foot tall by 1.5 feet wide

**Flowers:** Slightly fragrant 2.75 in bloom, gold with green throat

**Bloom time:** Late spring to fall

**Leaves:** Arching strap shaped green leaves

### Pests and Disease Problems

Daylily rust is common. Rabbit resistant

### YELLOW DAYLILY 'STELLA D'ORO'

*Hemerocallis spp.*

*Perennial*

**Sun / Part Shade**

1' Tall x 1.5' Wide Color: **Yellow Gold**

**Blooms:** Early summer-fall rebloomer    Dormant in winter

**Grown by a Denton County Master Gardener**

**Water:** Medium, Drought Tolerant

### Plant Care

The best location is in full morning sun and full afternoon shade. Daylilies do not like wet, soggy soil. They perform best when planted in raised beds rich in organic material. Plant them only to the base of the crown. Do not plant deeper than where the plant is green. Remove old blooms gently. Cut the foliage after it dies to the ground in late fall or early winter. Daylilies should be divided every three to five years.

### Warning

Toxic for cats but not dogs.
